

English

Description of equipment:

- EN 358:2018: Adjustable tether serving to connect a belt holding a person in position to a structure surrounding it.

- The equipment is not intended for use on a lifeline.

WARNING:

This notice must be read and kept by its owner and the users. If it is lost, the notice is available on the website [beaplan.com](#).

It is essential, for the safety of the user, that the retailer supplies the method of use, the instructions for maintenance and periodic examinations, and the instructions relating to repairs, drafted in the language of the country of use of the product.

The few cases of incorrect use presented in this notice are not exhaustive.

There exists a multitude of incorrect uses that is not possible to list.

This product is solely intended for work at a height.

Work at a height is a dangerous activity.

Learning special techniques and competencies is required for use of this product.

The equipment must be used only by a person trained and competent to use it in complete safety.

The use of "second hand" equipment is strongly advised against.

You are responsible for your own actions and decisions.

The equipment is reserved for the use of only one person.

High and low temperatures, moisture, ice, mud, rain, oil and dust may negatively influence the performance of the device and of the associated rope. The equipment may also be degraded by dragging or coiling it, using it on sharp edges causing cuts or abrasion, and by exposure to the weather.

Any modification to the equipment or any addition may not be done without the prior written agreement of the manufacturer, and any repair must be done in accordance with the operating methods of the manufacturer.

The equipment must not be used beyond these limits, or in any situation other than that for which it is provided.

It is essential to check the adjustment and/or fixing element regularly during use.

The equipment must not be used for stopping falls.

It may be necessary to supplement the systems for holding the worker in position with devices for protection against falls from a height, of the collective type (nets) or individual type (systems for stopping falls in accordance with EN 363).

Danger is liable to arise when several articles are used in which the safety function of one of the articles is affected by the safety function of another article or interferes with it.

In a system for stopping falls, it is essential, for reasons of safety, to check the free space required under the user on the site before each possible use, so that, in the event of a fall, there is no collision with the ground, and no other obstacle is present on the path of the fall.

USE:

The anchoring must preferably be above the position of the user and must comply with the requirements of the anchoring-device standard EN 795; in particular the minimum strength of the anchoring must be 12 kN.

The tether must be connected to the EN 358 or EN 318 holding attachment points (figure 1).

The anchoring point (EN 795) must be situated level with the waist or above.

Do not use this product if risks of falling exist.

The maximum acceptable height of fall is 0.5 m.

In the event of a risk situation, it is essential to add a second system for protecting against falls at a height, such as a mobile anti-fall device or a tether with absorber.

Use of the tether around a structure situated level with the waist or above (A): fix the karabiner connected to the Adjust-air to one of the lateral attachment points of the harness, encircle the structure and snap the Air link onto one of the attachment points of the belt. Pull on the free length in order to tension the tether (figure 2), press the cam in order to slacken the tether (figure 3).

Use at the ventral point (B): Fix the karabiner connected to the Adjust-air onto your ventral attachment point and connect the Air Link to an anchoring point above the user. To reduce the length, pull on the free length; to slacken the tether, tension it and, while firmly holding the free length, press on the cam.

COMPATIBILITY:

The system can be presented with a stitched termination without connector or with its various connectors: Air Link, Air Hook M, Air Hook L.

Main materials: Locker, connector: stainless steel, aluminium. Rope and tubular strap: polyamide.

RESCUE:

A rescue plan must be established in order to deal with any emergency liable to arise during work.

Before and during, provide an emergency plan and define the means for acting quickly in the event of any difficulties encountered.

This involves suitable training in rescue techniques.

Warnings relating to medical conditions liable to affect the safety of the user during normal use and in the event of an emergency.

INSPECTION POINTS:

The safety of the user depends on maintenance of the efficacy and strength of the equipment.

If the product shows signs of deformation, corrosion, cracking, formation of sharp edges, etc, REPLACE it immediately.

The system must be removed from circulation if its safety is in doubt.

The periodic examination must be carried out at least once every twelve months.

Regularly check the markings on your equipment.

Before use:

- check the state of the body, the connection hole, the cam groove, the locking elements (screw, pivot point) and the spring of the locking system.

- Check that there are no traces of cracks, marks, corrosion, deforma-

tion or wear.

- Check that the tether is indeed captive.

- Check the cleanliness of the system.

- And check that the tether does not exhibit any excessive wear (checking the safety-device stitches).

During use: check the connections and ensure that the components are properly adjusted with respect to one another.

MAINTENANCE:

- Keep your harness in a safe operating condition by carrying out simple preventive action such as cleaning and proper storage.

- If the product is dirty, clean with soft water, and wipe it with a non-abrasive cloth.

- Do not soak the Adjust-air completely in water.

STORAGE AND TRANSPORT CONDITIONS:

- Store the product dry and away from UV and chemical products and in a temperate place.

LIFETIME:

- The lifetime of the metal parts is unlimited.

- Nevertheless an exception event may lead you to scrap the product after a single use (type and intensity of use, use environment: aggressive environment, marine environment, cutting edges, extreme temperatures, chemical products, etc) and in particular if it has been used to stop a fall.

- The equipment may optionally be reused if a competent person so authorises in writing.

- A product must be considered to be unusable when it has suffered high forces (violent fall with high weight), when the reliability of the product is put in doubt and when you do not know the history of the product.

SIGNIFICANCE OF MARKINGS

BEAL GUARANTEE

This product is guaranteed for 3 years against any faults in materials or manufacture. Exclusions from the guarantee: normal wear and tear, modifications or alterations, incorrect storage, poor maintenance, damage due to accidents, to negligence, or to improper or incorrect usage.

Responsibility

BEAL is not responsible for the consequences direct, indirect or accidental, or any other type of damage befalling or resulting from the use of its products.

Français

Descriptif de l'équipement :

- EN 358:2018 : Longe réglable servant à relier une ceinture de maintien au travail à une structure l'entourant.

- Le matériel n'est pas destiné à une utilisation sur ligne de vie.

AVERTISSEMENT :

- Cette notice doit être lue et conservée par son propriétaire et les utilisateurs.

- En cas de perte, la notice est disponible sur le site [beaplan.com](#).

- Il est essentiel pour la sécurité de l'utilisateur que le revendeur fournit le mode d'emploi, les instructions pour l'entretien, pour les examens périodiques ainsi que les instructions relatives aux réparations, redigées dans la langue du pays d'utilisation du produit.

- Les quelques cas de mauvaises utilisations présentés dans cette notice ne sont pas exhaustifs.

- Il existe une multitude de mauvaises utilisations qu'il n'est pas possible d'énumérer.

- Cet apprendis est exclusivement destiné à relier une ceinture de maintien au travail à une structure l'entourant.

- L'apprentissage des techniques et compétences particulières sont requises pour l'utilisation de ce produit.

- L'équipement ne doit être utilisé que par une personne formée et compétente pour l'utiliser en toute sécurité.

- L'utilisation de matériel "d'occasion" est fortement déconseillée.

- Vous êtes responsables de vos propres actions et décisions.

- L'équipement est réservé à l'usage d'une seule personne.

- Les hauts ou les basses températures, l'humidité, la glace, la boue, la pluie, l'huile, la poussière peuvent influencer négativement les performances du dispositif et de la corde en association.

- Le matériel peut également être dégradé par le fait de le traîner ou de l'enrouler, ou l'utiliser sur des arêtes vives provoquant des coupures ou de l'abrasion et par l'exposition climatique.

- Toute modification de l'équipement ou toute adjonction ne peut se faire sans l'accord préalable écrit du fabricant et toute réparation doit être effectuée conformément aux modes opératoires du fabricant.

- L'équipement ne doit pas être utilisé au-delà de ses limites, ou dans toute autre situation que celle pour laquelle il est prévu.

- Il est impératif de vérifier régulièrement les éléments de réglage et/ou de fixation pendant l'utilisation.

- L'équipement ne doit pas être utilisé pour l'arrêt des chutes, il peut être nécessaire de compléter les systèmes de maintien au travail avec des dispositifs de protection contre les chutes de hauteur, de type collectif (filets) ou individuel (système d'arrêt des chutes conformes à l'EN 363).

- Il existe un danger susceptible de survenir lors de l'utilisation de plusieurs articles dans lesquels la fonction de sécurité de l'un des articles est affectée par la fonction de sécurité d'un autre article ou interfère avec celui-ci.

- Dans un système d'arrêt des chutes, il est essentiel, pour des raisons de sécurité, de vérifier l'espace libre requis sous l'utilisation sur le lieu de travail avant chaque utilisation possible, de manière qu'en cas de chute, il n'y ait pas de collision avec le sol, ni présence d'autre obstacle sur la trajectoire.

COMPATIBILITY :

- The system can be presented with a stitched termination without connector or with its various connectors: Air Link, Air Hook M, Air Hook L.

Main materials: Locker, connector: stainless steel, aluminium. Rope and tubular strap: polyamide.

RESCUE:

A rescue plan must be established in order to deal with any emergency liable to arise during work.

Before and during, provide an emergency plan and define the means for acting quickly in the event of any difficulties encountered.

This involves suitable training in rescue techniques.

Warnings relating to medical conditions liable to affect the safety of the user during normal use and in the event of an emergency.
